

Thesis Requirement

Learning objective:

- Comprehensively master the scientific field under study and the research methodology used.
- Communicate and publish through seminars or in the form of scientific articles in scientific journals as a means to disseminate the research results obtained.
- Integrate and apply concepts and methodologies learnt during lectures.
- Critically review, appraise and synthesise existing literature or evidence in a specific area.

Generic information regarding master thesis:

1. The final project can be prepared in the form of a thesis, prototype, capstone project, or other similar final project;
2. The final project is disseminated to the academic community and/or directly to the wider community in the form of scientific publications, exhibitions, and/or presentations at national or international meetings;
3. Scientific publications as referred to in number 2 that have been accepted at least in accredited national journals; and
4. In the event that students do not prepare scientific publications as referred to in number 3, the dissemination / publication component of the final project is assessed using criteria and methods determined by the Study Programme and it is possible to get an A grade if it meets the predetermined criteria.

Scope of thesis

- a) Based on research scope
 - Policy Research and Policy Analysis
 - Management Research
 - Programme Evaluation
 - Implementation Research
- b) Based on research design
 - Observational research
 - Experimental research
 - Qualitative research
 - Combined quantitative and qualitative research, namely action research, mixed-methods and case studies.

Thesis assessment:

- Proposal Seminar
- Result Seminar
- Thesis Examination
